

CMBTrio

Calcium, Magnesium & Boron are three of four elements that need to be maintained at luxury levels within the plant throughout the active stages of plant growth. CMBTrio is a high analysis formulation of the three crucial elements which have been complexed with Fulvic Acid and Mannitol.

Fulvic acid is a natural chelation agent which dramatically improves absorption of nutrients into the plant and the presence of Mannitol provides growth stimulation and aids the movement of nutrients within the plant.

- **Calcium**—improves the uptake of all nutrients, builds sugar levels and is needed in every cell and at every growing stage
- **Magnesium**— is a key component of chlorophyll which has a direct influence on potential sugar production
- **Boron**— opens the pathway for the translocation of sugars within the plant, particularly to the roots o aid root development and microbial stimulation

Calcium	Magnesium	Boron	Nitrogen	Potassium	pH
15%	2.38%	0.26%	13.73%	0.10%	4.0—5.0

Turf Foliar Applications	Turf Drench Applications	Crops & Broad acre	Garden beds & Pots	Home lawns
5-10L/ha Monthly	20L/ha Monthly	5L/Acre	20ml/10L water	100ml / 100m2
